Amendments to the Claims

Please amend the claims in the manner indicated.

- 1. (previously presented) A mobile communication device comprising:
- a first processor adapted to execute a user application;
- a second processor adapted to process a wireless communication, wherein the second processor is capable of initiating the wireless communication independently of the first processor; and an input port coupled to the first processor and the second processor.
- 2. (previously presented) The mobile communication device of claim 1, further comprising a display, wherein the first processor and the second processor are further adapted to display information on the display.
- 3. (previously presented) The mobile communication device of claim 1, further comprising an interface adapted to couple the first processor to the second processor.
- 4. (previously presented) The mobile communication device of claim 3, wherein the interface comprises a Peripheral Components Interface bus.
- 5. (previously presented) The mobile communication device of claim 3, wherein the interface comprises a serial bus.
- 6. (previously presented) The mobile communication device of claim 3, wherein the interface is adapted to provide the second processor user data from the input port.
- 7. (previously presented) The mobile communication device of claim 1, further comprising:
- a first memory coupled to the first processor; and
- a second memory coupled to the second processor.
- 8. (previously presented) The mobile communication device of claim 1, further comprising:
- a first power source coupled to the first processor; and
- a second power source coupled to the second processor.
- 9. (previously presented) The mobile communication device of claim 1, wherein the second processor comprises a digital signal processor.
- 10. (previously presented) The mobile communication device of claim 1, wherein the first processor is further adapted to execute a user application independently of the second processor.

- 11. (currently amended) A mobile communication device comprising: a non-volatile memory; an input port to receive data from a user; an application subsystem coupled to the input port; and a wireless subsystem coupled to the input port and to the non-volatile memory.
- 12. (previously presented) The mobile communication device of claim 11, further comprising an interface to couple the application subsystem to the wireless subsystem.
- 13. (previously presented) The mobile communication device of claim 12, wherein the interface comprises a serial interface.
- 14. (previously presented) The mobile communication device of claim 11, wherein the wireless subsystem comprises a digital signal processor.
- 15. (previously presented) The mobile communication device of claim 14, wherein the wireless subsystem further comprises a transmitter and a receiver.
- 16. (previously presented) The mobile communication device of claim 11, wherein the application subsystem is adapted to execute a user application and process data provided with the input port.
- 17. (previously presented) The mobile communication device of claim 12, wherein the interface couples the wireless subsystem to the input port.

Attorney Docket No: 42390P9741 3 Serial No: 09/661,841

- 18. (currently amended) A method of processing a communication comprising: providing data to an application subsystem from a user through an input port; and providing data to a wireless subsystem from the user through the input port to initiate a wireless communication, the wireless subsystem and the application subsystem being within a mobile communication device.
- 19. (original) The method of claim 18, wherein providing data to the application subsystem includes providing data through an interface.
- 20. (original) The method of claim 18, wherein providing data to the wireless subsystem includes providing data through an interface.
- 21. (original) The method of claim 19, further comprising executing an application with the application subsystem independently of the wireless subsystem.
